9/21/11

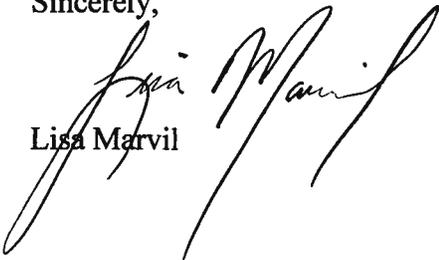

Lauren,

Dave and I would like to request the following amendments to our certificate of appropriateness:

1. 21" pans on standing seam roof instead of 17" pans. Our roofer (John Puleo) says that the material he can get for the 21" pans is superior to the 17". According to him, the 17" also results in significant material waste. Additionally, the 21" is less expensive, a significant factor in our project. He reports that he has recently installed 21" pans on other homes in historic districts in Loudoun County.
2. On the rear elevation only, we would like to request 2-lite over 2-lite windows instead of the current 4-lite over 4-lite. 2-lite over 2-lite provides for better esthetics due to the size/shape of the windows on the rear elevation. Examples of the rear elevation with both options are provided.

Thank you for your time and help.

Sincerely,

Lisa Marvil
